

**INSPECTORATE**

# Inspectorate International

Industrial catalysts containing a range of valuable metals are often purchased and sold without checking their true value. The outcome can be disappointing, and is easily avoided.

Using Inspectorate to independently inspect, sample and assay your catalyst ensures you obtain the optimum price, and can create profit rather than loss.

## Minimising Risk.

## Maximising Benefit.

Inspectorate has many experienced inspection personnel with expertise in catalyst sampling, and a number of strategically located, ISO Accredited, laboratories offering traditional wet chemistry, instrumental and fire assay techniques.

Inspectorate leads the industry in technical quality and client service. We are also committed to our Fair Trading Policy which governs compliance with ethical business standards.

**INSPECTORATE**

# Catalyst Expertise

## Protecting your commercial interests

With over 150 years' worldwide experience in precious and base metals, Inspectorate is ideally qualified to represent your best commercial interests. We can assist in maintaining or increasing your profitability by helping you to avoid the problem areas encountered with all types of fresh and spent catalyst.

### A Client Experience

Petrochemical shutdown material analysis for platinum

Inspectorate Party Assay: 1.324%

Buyer's Assay: 1.269%

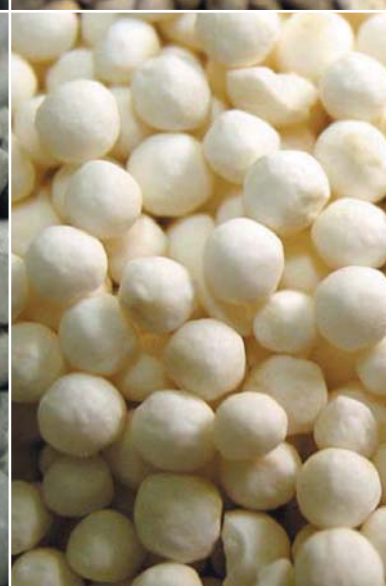

Difference of 0.055%

Equivalent to 16.251 troy ounces

Umpire Assay: 1.333%

Monetary Value **\$12,500**

- Through highly accurate measurement of the metal content of your catalyst, we can ensure that your investment is working for you.
- We can assess the differences in metal content in new and spent catalysts and make sure you only pay for what you use.
- Variance in metal content can lead to inefficiencies in petrochemical refining processes. We can avoid this potential problem.
